CIBER LAUNCHES "READY-TO-RUN" HOSTING SOLUTION FOR MID-MARKET SAP CUSTOMERS

EDISON, N.J. – Aug 31, 2009 – CIBER, Inc. (NYSE: CBR) is addressing the growing challenges faced by mid-market and entry-level customers who require a solution for hosting SAP® applications with the launch of CIBER Ready-to-Run, a pre-packaged targeted solution designed to provide a complete landscape of SAP solutions.

With Ready-to-Run, CIBER brings together a pre-packaged solution that provides a complete landscape and technical support, including database management with a rapid deployment implementation. The mid-market client can now choose this pre-packaged hosting solution to expedite their implementation with a level of comfort, stability, and cost-efficiency while enhancing their services and capabilities with 99.5 percent service level agreement (SLA) availability.

According to AMR Research, midsize clients are asking for combined implementation, maintenance and hosting capabilities, with a lower ongoing total cost of ownership. "Non-traditional purchase and delivery options for ERP are becoming the norm," said Dana Stiffler, AMR Research. While 47 percent of respondents to a recent AMR survey indicated a preference for the traditional licensed, onsite model, a full 40 percent had a hosted instance outside their firewalls. Looking ahead three to five years, AMR says buyers are "even more enthusiastic about alternative sourcing of enterprise functionality."

CIBER's Ready-to-Run blends a cost-effective solution based on best practices, state-of-the-art data center facilities, industry standard platforms, global SAP certifications in hosting and application management services as well as comprehensive compliance and auditability. Ready-to-Run is best suited for clients who require rapid implementation with minimal software customization and are seeking a strong ROI with a rapid time-to-benefit from their investment in SAP solutions.
