

Online Admissions Application

Powered by Oracle

Today's colleges and universities need new ways to control costs, gain flexibility from your PeopleSoft systems, and position your institution as a leader in technical innovation in order to meet the changing demands of your staff, faculty and students. Modernizing your online application experience is one area where cost efficiencies and system flexibility can be achieved quickly.

Ciber's Online Admissions Application (OAA) Solution Framework allows you to configure your admissions application as an extension of PeopleSoft Campus Solutions to support your unique and evolving business requirements.

Extend your PeopleSoft online system

Built with PeopleTools and Oracle Admissions Application Web Services (AAWS) functionality, Ciber's OAA framework is fully integrated into an existing or new Campus Solutions system. Regardless of your institution's size or complexity, OAA lets you leverage leading technology and use strategic admissions application processes, achieving unique administrative requirements.

A fully functional, flexible and secure application system drives cost savings, requires fewer resources, integrates with your

IT Campus Solutions and extends the life of your existing technology environment.

Flexibility is built into the Online Admissions Application

- Extend the functionality of your existing Campus Solutions configuration and PeopleTools expertise.
- Use with any size institution: OAA supports varied admission needs across colleges, plans and careers.
- Leverage multiple academic structures, admit types, term values, application centers and more from within PeopleSoft.
- Configure and update the system in-house – no third party needed to make changes.
- Benefit from multi-institution, multi-currency and multi-language operations.

Use institution dollars on your mission, not your technology

IT budgets can be a heavy burden for many institutions. Instead of pouring critical dollars into the creation and maintenance of an online application, use more of these resources on projects to support your institution's mission. As a low-cost solution, Ciber's OAA framework eliminates typical charges based on the number of templates or applications created or submitted through the system. With reduced long-term maintenance and upgrade costs, Ciber's OAA helps your institution save precious resources while extending the life and functionality of your existing Campus Solutions system.

Configure your admissions system in-house

System flexibility and functionality are critical in today's modern higher education IT environments. OAA's comprehensive, extensible architecture allows you to leverage existing PeopleSoft resources to make updates as the needs of your institution change, instead of waiting on third parties for system modifications. Ciber's OAA allows specific tailoring and branding for a fully successful implementation that integrates and communicates as needed with your institution's Campus Solutions system.

Adopt complete functionality and security

Higher education institutions face the daunting challenge of adapting quickly to serve a fast-moving, always-connected student population. OAA helps your institution quickly adopt new technologies to meet the needs of your applicants while fulfilling your unique admission requirements. Our innovative solutions enhance and strengthen capabilities and processes to make the most complete, flexible and modern admission system available. And, since the application uses all of the control and security of Campus Solutions, your sensitive application data is fully protected.

Gain flexibility with Online Admissions Application

Ciber's OAA framework transforms the critical administrative process into a flexible, dynamic solution. The system allows applicants to create unique logins and save applications for completion across single or multiple sessions. In addition,

applicants can specify references, which can be completed within the application or uploaded by others as needed. Additionally, OAA allows applicants to upload necessary documents or supporting materials.

The system also allows you to:

- Create as many application templates as needed with tailored branding.
- Configure supplemental questions specific to each template (such as for transfer students).
- Define various sections for ethnicity, activities, test results, education and more for each template without impacting other templates.
- Form unique headers/footers at a template level for population-specific instructions.
- Search/match existing applicant records already in your PeopleSoft system.
- Retrieve application information from database suspense tables using PS Query.

Rely on Ciber for an accelerated Oracle deployment

Ciber can quickly get your institution up and running with a typically fixed-priced implementation, including base project plan and installation, initial setup and configuration, testing, deployment assistance and training.

We have helped more than 1,000 clients in more than 2,000 separate Oracle engagements, and we are an Oracle Platinum Partner. With expertise in higher education, Ciber offers a unique accelerated deployment strategy. With model configuration, data conversion templates and other project strategies in place, Ciber can greatly accelerate your implementation.

About Ciber
