

Supply Chain Strategies

Transform your supply chain and cut costs by more than 10 percent

Streamline supply chain management and make a difference for your organization.

Managing supply chain complexity requires a vast amount of internal and external data from multiple sources. How will you transform this data into actionable insights for leadership, suppliers, distributors, and customers? Supply chain leaders know they need to easily see what needs attention, what actions to take and who to call. But today, most supply chain teams struggle to move as fast as they need to, make data-supported, time-sensitive decisions and validate results that impact their organizations.

Recommendations for your Supply Chain Action Plan:

Supply chain data should flow into insightful dashboards and reports as seamlessly as products move through an optimized, well managed supply chain.

Appealing dashboards are only actionable when they also provide drill down capability into multiple layers of underlying transactional data with easy to use filters.

Supply chain reporting for day-to-day operations is necessary, but supply chain analytics must also highlight where corrective action or improvements are needed.

Supply chain managers must be able to slice and dice their data into multiple views depending on their needs of the day, and not have to call IT to do their jobs.

Anywhere access gives supply chain managers and workers the ability to use their desktop, tablet or smart phone to do their job, make decisions and act on them quickly.

Partner with a business solutions integration expert

Ciber's Supply Chain Actionable Analytics solution puts control back in the hands of supply chain leaders and their teams. It is affordable, rapidly deployed and provides IT with what they need for data security, seamless integration of data flows and relieves them from many of the constant demands of supply chain management.

Ciber is a business solutions integrator and talent services firm with deep manufacturing industry expertise. We solve the most difficult challenges in digital transformation. Ciber makes IT modernization practical with comprehensive sourcing options – from staffing to managed capacity services.
