

Reimagine technology to accelerate your business

Project Management Office

Organizations are asking IT to deliver higher value to the business while improving performance and productivity. It is not as easy as it may sound to create that value, with the struggle to quantify return on investment, and to deliver quality projects on time and on budget. When organizations are struggling to meet their strategic goals and objectives, determining how to invest in proposed initiatives, and at the same time lack visibility to project performance, it is time to consider a more strategic approach with the implementation of a Project Management Office (PMO).

Many companies have a PMO in place already, but the organization is struggling to see the value that it is providing. They have focused on developing and standardizing methodology, tools, and reports. These efforts can provide the transparency required to manage projects to deliver on time, on budget and with the approved scope, but it also can uncover new challenges. Teams that focus on individual initiatives

instead of strategic plans, find that processes are cumbersome and can't adapt as requirements change.

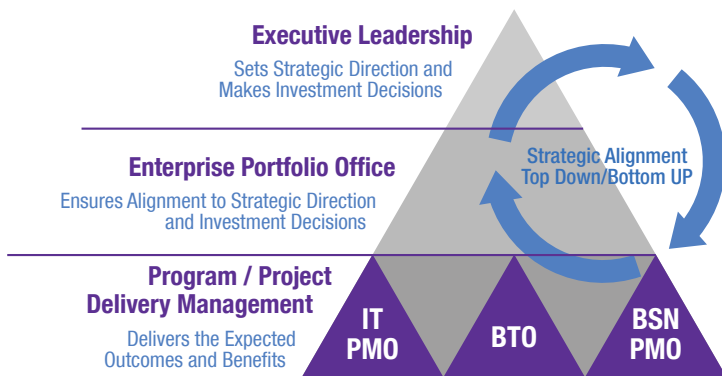

Deliver business value with a strong PMO

It can take up to three years to get a PMO implemented and operating efficiently and productively. Ciber's approach helps organizations transform more quickly and has been proven to produce a custom-tailored, mature PMO within 18 months.

Ciber helps clients who are either implementing a new PMO from the ground up, or want to improve the performance and value of an existing PMO. Ciber assesses the organization and leverages industry best practices to develop a PMO that brings transformative value to the organization.

Implementing or maximizing the value of an existing PMO requires a thorough understanding of the organization's strategy, strengths and opportunities for improvement. Ciber's approach tailors the PMO structure to meet each organization's unique needs. Ciber experts implement the following types of PMOs:

Enterprise Program Management Office - focuses on organizational strategy and business value, portfolio/investment planning, resource demand/capacity management, and ensures alignment of programs and projects to the strategy, goals, and objectives of the organization. (see diagram 2.1)

Enterprise PMO diagram 2.1

Business Transformation Office - focuses on the successful delivery of a large organizational business transformation change through integrated program management, organizational change management, and business process optimization.

IT / Business Unit PMO - focuses on a business unit's or IT's strategy and portfolio of projects.

PMO – Center of Excellence - can be integrated in other types of PMOs, or be implemented as a stand-alone. The purpose of this PMO is to provide the standards, processes, tools and expertise to support the delivery of projects throughout the organization. (see diagram 2.2)

Project Support Administration Office – provides administrative support and reporting in a cost effective manner to allow the PMO team to focus on effective and efficient project delivery.

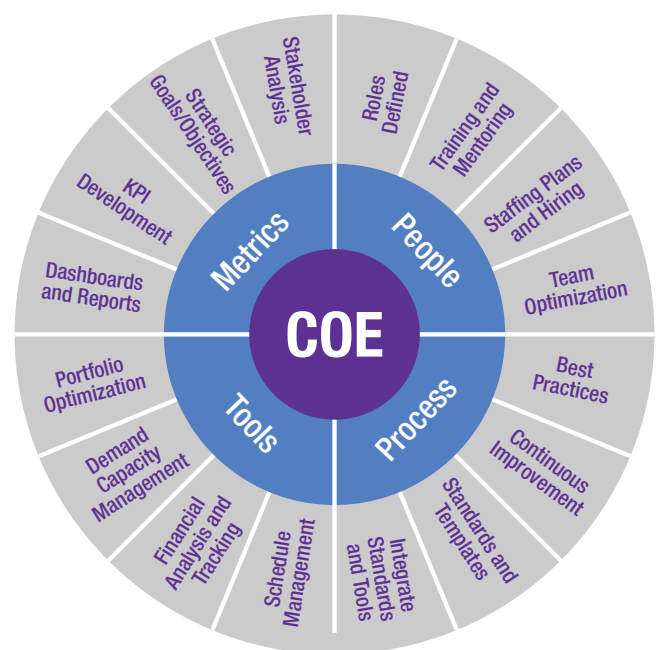

Ciber's PMO clients outperform the industry by with increased project value, improved quality metrics, better return on investment and reduced project variability.

Partner with Ciber's PMO experts

What makes Ciber different isn't what we offer. It's how we offer it. We keep up with market trends and the best available technology because it allows us to bring the best results to We see what can be done to optimize and streamline the technology investments you already have in place and make them relevant

to what your business needs today. We apply creative thinking, but also harness the tried and true, the reusable, and most efficient approaches.
